TIO Hub Product Screenshot Gallery

TIO OPERATIONS HUB / CONTROLLED DOCUMENT

TIO-DOC-002 | 2.0 **ISSUED | 24 OCTOBER 2026**

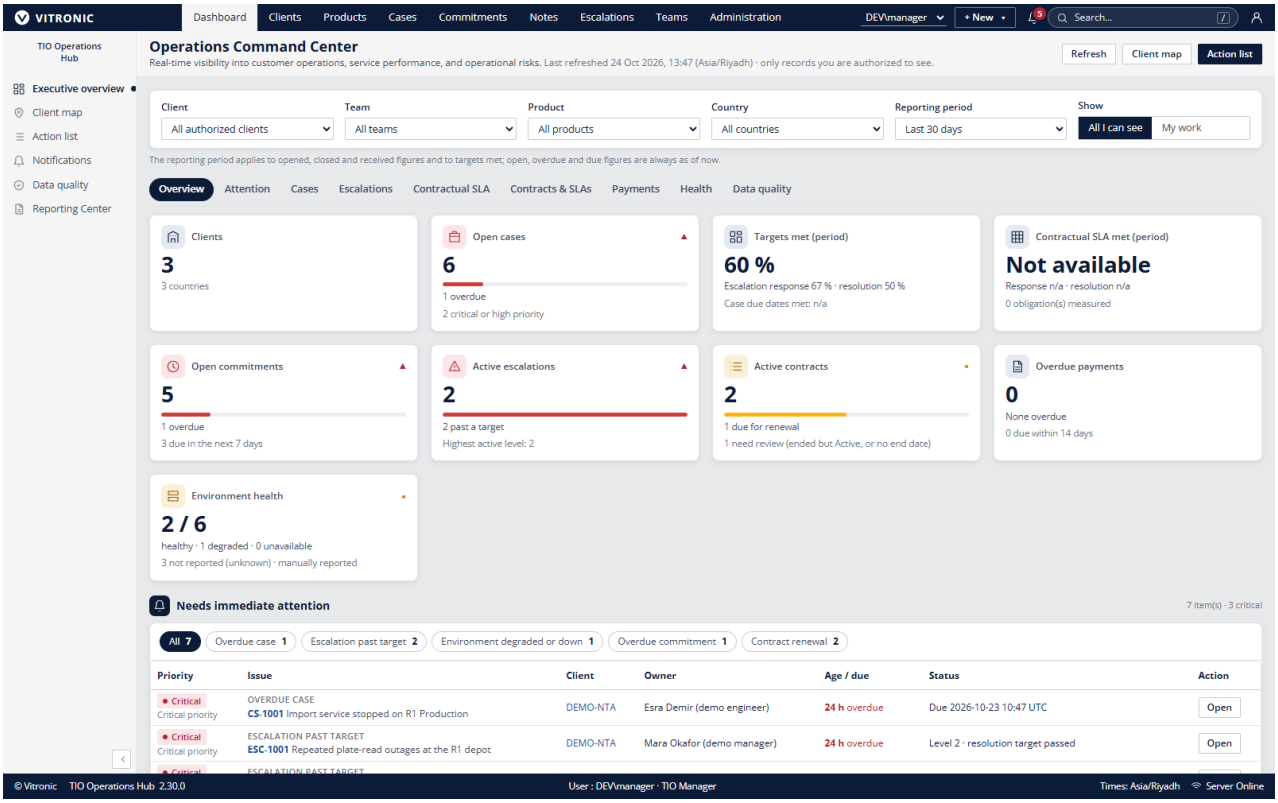

Control field	Controlled value
Document ID	TIO-DOC-002
Version / status	2.0 / Illustrative product record
Classification	Internal; external use requires brand and product approval
Owner / approver	Product owner (proposed) / Brand owner before external use
Capture date / review	24 October 2026 / Refresh after material UI release
Capture baseline	Local TIO Hub 2.30.0 development build using fictional demo seed and isolated database
Supersedes	Initial screenshot gallery dated 24 October 2026

Capture provenance and limitations

The images below are direct UI captures from a locally run TIO Hub build. The application used fictional development records in a dedicated development database. They are not customer records, production evidence, user research, performance telemetry or product acceptance proof. Displayed counts are snapshots of that local seed and role configuration.

The interface includes the reference VITRONIC wordmark. Obtain the brand owner's approval before external distribution, or replace the capture with an approved brand-safe image. Confirm the target release and user role before using a screenshot as training material. Names, fields, values, menus and report availability may differ by deployment and permission.

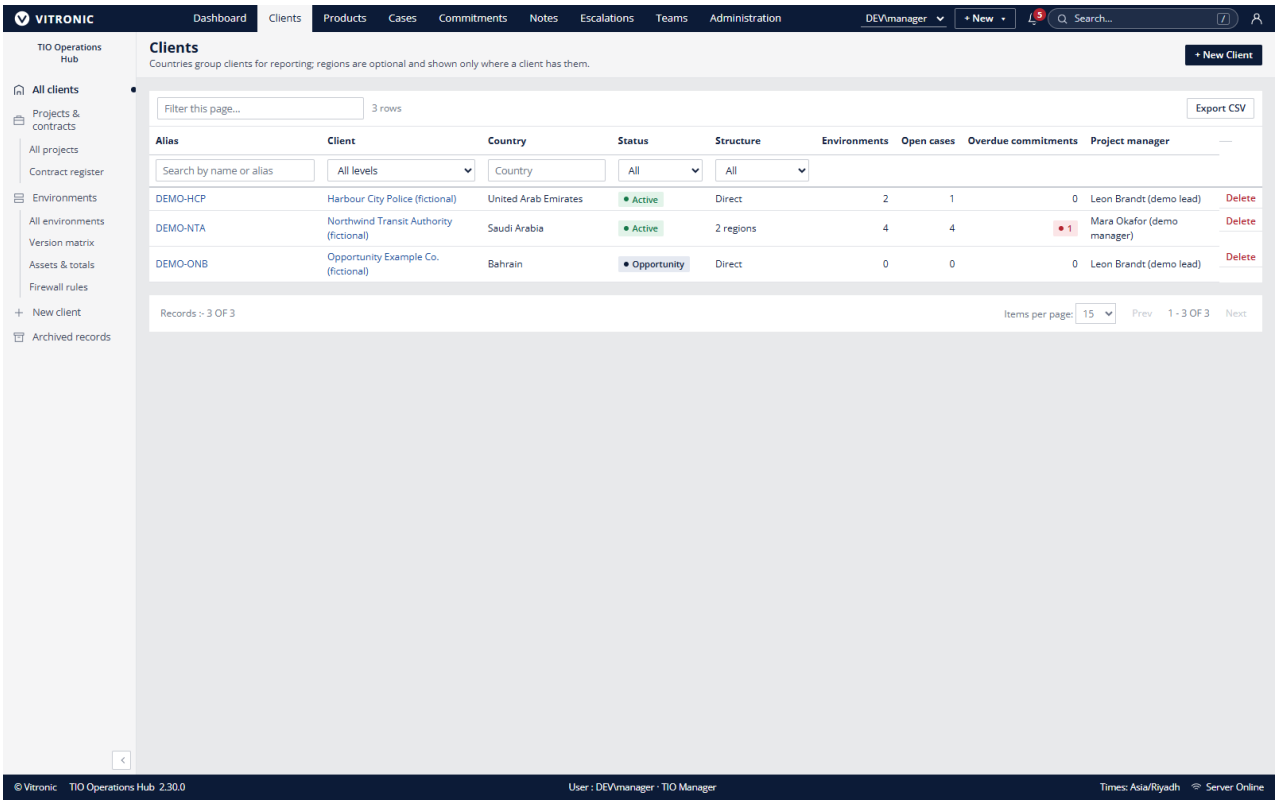

Dashboard

Operations overview with summary cards and action list

Fictional development snapshot. KPI cards show record counts and status summaries, not customer outcomes or service guarantees.

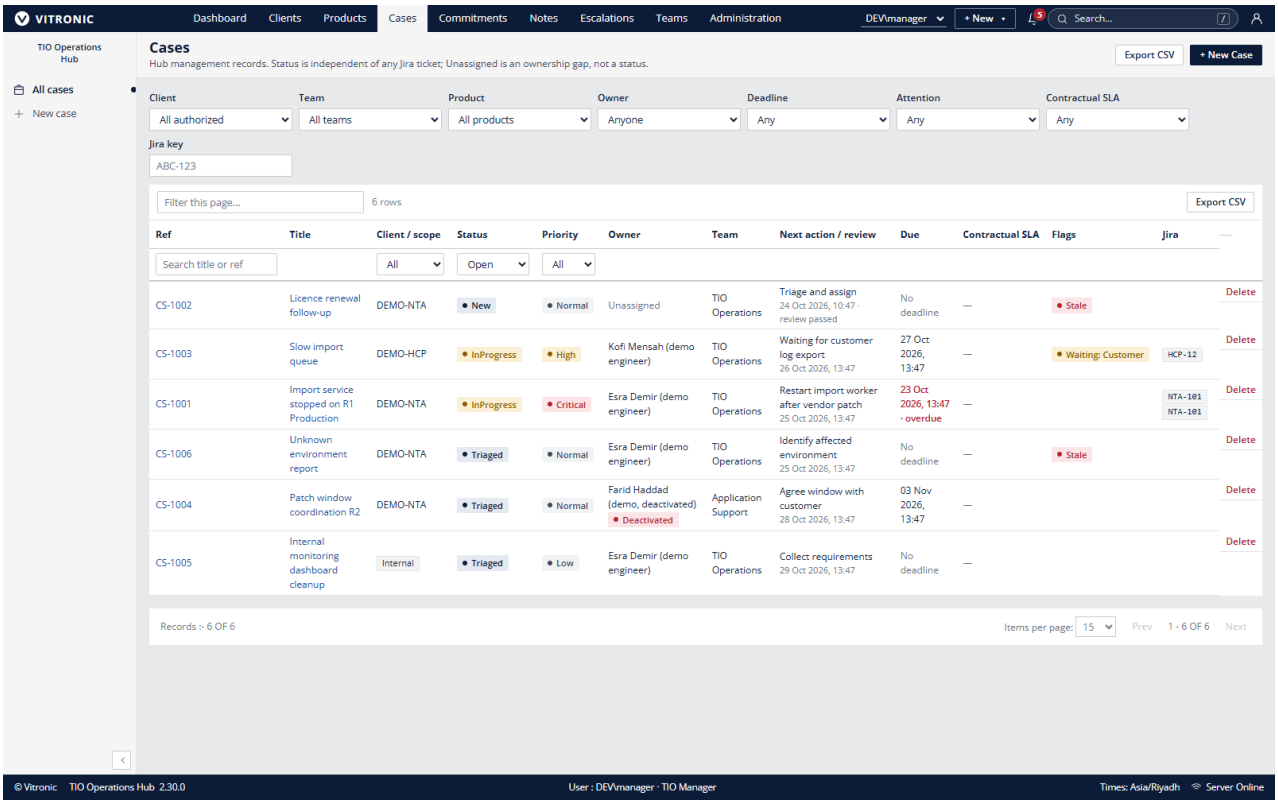

Client register

Client register with fictional example organizations

All displayed organizations and records are fictional. Visible columns depend on the user's access.

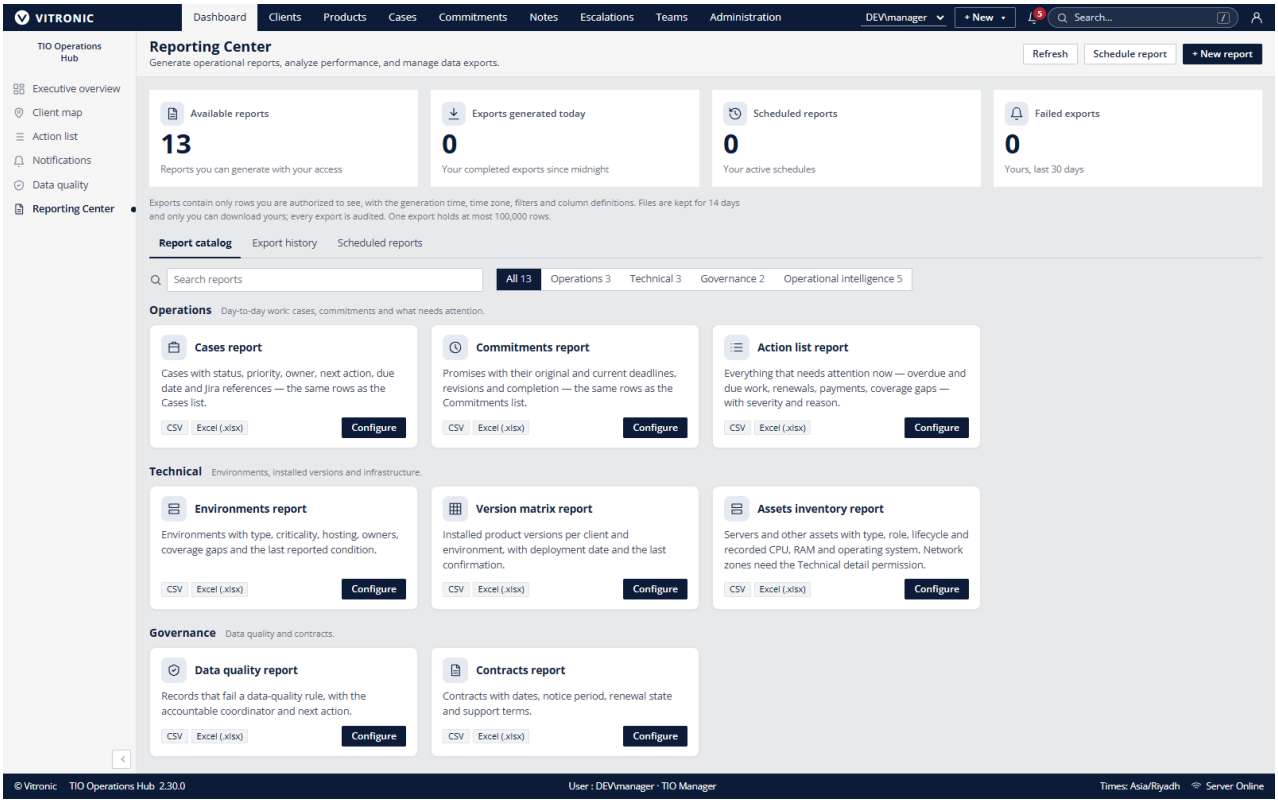

Case register

Case list with fictional references and owners

References and case details are fictional. The list illustrates current UI fields, not process performance.

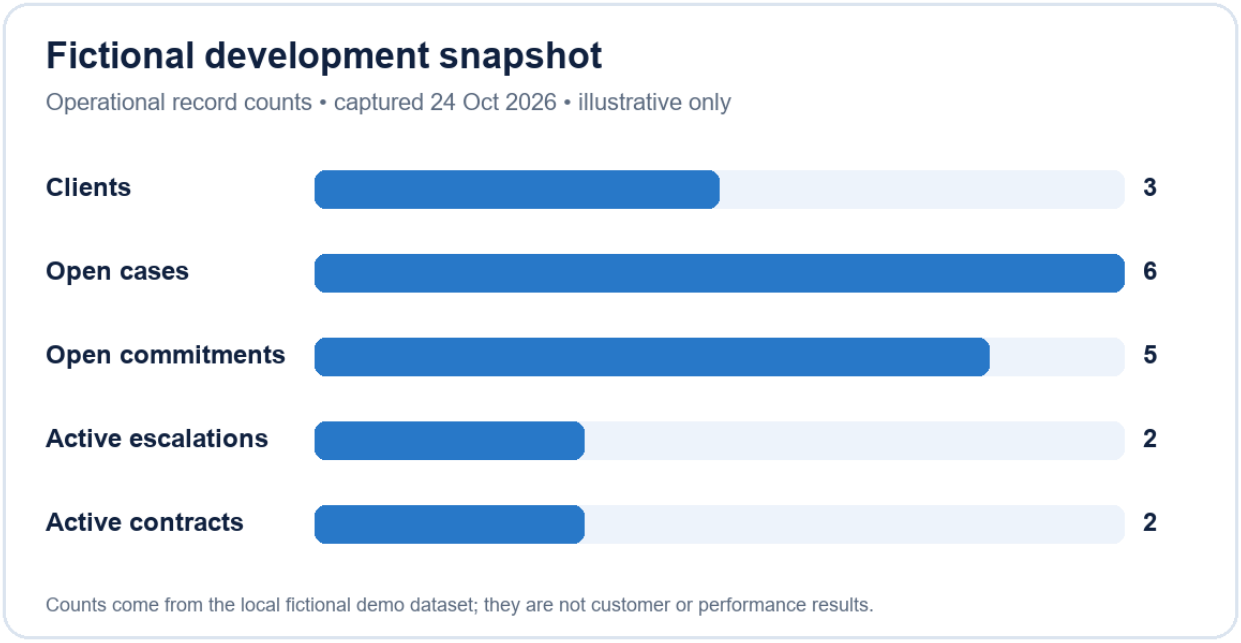

Reporting Center

Reporting Center with report catalog

Catalog and available reports vary by release and role. The counts are local demo configuration values.

Illustrative record-count chart

Bar chart showing fictional demo record counts

Derived from the same local demo dashboard snapshot. Categories have different meanings and should not be compared as a performance score.

Revision history

Version	Date	Change	Approval
1.0	24 Oct 2026	Initial screenshot gallery	Draft
2.0	24 Oct 2026	Added provenance, classification, limits and controlled screenshot use	Product/Brand approval pending
