TIO Hub Documentation Register and Use Guide

TIO OPERATIONS HUB / CONTROLLED DOCUMENT

TIO-DOC-001 | 2.2	**ISSUED | 24 OCTOBER 2026**

Control field	Controlled value
Document ID	TIO-DOC-001
Version / status	2.2 / Advanced controlled working pack - approval pending
Classification	Internal working pack; selected commercial drafts require approval before external issue
Owner / approver	Document controller (proposed) / Product owner and relevant function owners (approval pending)
Issue date / review	24 October 2026 / 24 January 2027 or on material product change
Source baseline	Repository working tree reviewed 24 October 2026; not a clean release snapshot
Supersedes	Initial portfolio draft dated 24 October 2026

1. Purpose and control statement

This register defines the purpose, audience, status, owner, approval boundary and source of truth for the TIO Operations Hub documentation suite. The pack is a controlled working draft, not an approved contractual, security, product-release or customer-commitment set. Each document carries its own identifier and control record. A change to an authoritative product source takes precedence over copied summary text; the affected summaries must then be reviewed before reissue.

Issue rule: No item marked “approval pending” may be represented as approved policy, contractual commitment, audited evidence, certification, customer result or production configuration. Before external distribution, the document owner records the approved version, approver, effective date, audience, distribution method and any redactions in the release record.

2. Controlled document register

ID	Document	Primary audience	Status and controlled use	Owner / approval route
TIO-DOC-001	Documentation register and use guide	All readers / document control	Working draft; governs this pack	Document controller / Product owner
TIO-ARC-001	System Design Document	Architecture, engineering, operations, security	Implementation-informed design baseline; not a deployment attestation	Engineering lead / Architecture and security review
TIO-BIZ-001	Product requirements and roadmap	Product, leadership, UX/UI	Draft; roadmap is a candidate sequence, not a commitment	Product owner / Leadership
TIO-MKT-001	Commercial brief and go-to-market	Sales, prospects, investors	Draft; claims require product and brand approval	Sales / Product owner
TIO-TECH-001	Engineering and delivery guide	Engineering, DevOps, QA	Working technical index; source links remain authoritative	Engineering lead / Release owner
TIO-OPS-001	User and operator guide	Users, support, operations	Draft; screens and permission behavior vary by release	Service owner / Operations
TIO-KB-001	Knowledge base	Users and support	Draft support answers; validate against deployed release	Support lead / Service owner
TIO-OPS-002	Standard operating procedures	Operations, administrators	Draft procedures; local runbooks and approvals required	Operations lead / Service owner
TIO-OPS-003	Service, contract and financial operations playbook	Service owners, contract owners, finance, ITSM operations	Proposed management controls; local approval required	Service owner / Product, Operations, Finance and Legal owners
TIO-SVC-001	Service-level schedule template	Provider and customer	Unexecuted template; every field requires agreement	Service owner / Legal and customer signatories
TIO-SEC-001	Security assurance position	Enterprise buyers, security reviewers	Evidence summary; not an assurance report or attestation	Security owner / Legal and executive approval
TIO-MKT-002	Customer case study template	Sales, customer marketing	Blank template; customer approval required	Marketing / Customer and legal approval
TIO-LEG-001	Terms of service drafting template	Legal and commercial owners	Non-operative drafting aid only	Legal counsel / Authorized contracting entity

ID	Document	Primary audience	Status and controlled use	Owner / approval route
TIO-LEG-002	Privacy notice drafting template	Privacy, legal, service operator	Non-publishable until deployment and jurisdiction review	Privacy counsel / Actual controller
TIO-DOC-002	Product screenshot gallery	Product, sales, training	Illustrative UI record from fictional local data	Product / Brand owner before external use

3. Source-of-truth hierarchy

1. **Deployed behavior:** verify the exact release, configuration, identity provider, grants and environment. Screenshots and draft prose do not override actual behavior.
2. **API and data contracts:** `docs/API.md`, `docs/openapi-v1.json`, application migrations/model, and `database/01-schema.sql` for the generated deployment schema. Confirm that API and schema artifacts match the intended release.
3. **Requirements and decisions:** `docs/REQUIREMENTS-COVERAGE.md`, `docs/DECISIONS.md`, `docs/IMPLEMENTATION-PLAN.md`, and current stage/decision records. A recorded decision with owner/date takes precedence over a speculative roadmap statement.
4. **Release and operations:** `docs/RELEASE-NOTES-2.30.0.md`, `docs/DEPLOYMENT-GUIDE.md`, `docs/OPERATIONS.md`, and `docs/TEST-RESULTS.md`. Their scope and issue dates matter; test results are not certification evidence.
5. **Audience documents:** this portfolio summarizes the sources above. Resolve discrepancies at the authoritative source first, then revise the affected summaries.

4. Release, review and change control

Every issue must identify: unique document ID, version, status, classification, owner, approver or approval status, issue date, review trigger, source baseline and revision history. Review also checks link validity, version-specific claims, product terminology, security/privacy boundaries, image provenance, accessibility, export rendering, and external distribution rights.

A major revision changes purpose, policy, product boundary, contractual language or audience. A minor revision adds or updates material without changing approved intent. Editorial corrections may use a patch increment, but must still be logged when issued externally. Each controlled document retains its own version; the portfolio issue version does not silently change unchanged document versions. All approval-pending items remain drafts until approved by the listed owners.

Mandatory review triggers: product release or API/schema change; authentication or access-policy change; material security/privacy incident; change to data processing, retention or hosting; a new service-level promise; new assurance evidence; change of legal entity/jurisdiction; external brand/customer approval; or discovery that any claim is inaccurate.

5. Audience and use rules

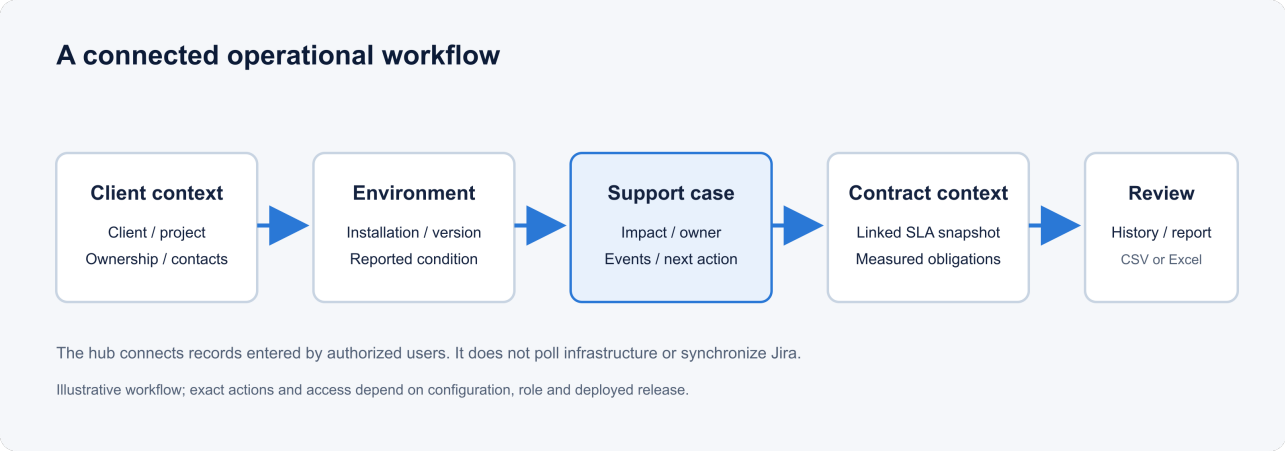

- Internal product, engineering and operations readers may use the technical guides as an index, then follow links to the authoritative source.
- Sales may use the commercial brief only after Product and Brand approve the final claims, images and distribution. No unapproved ROI, testimonial, customer outcome, uptime, certification or compliance claim may be added.
- Enterprise security reviewers may receive the assurance position only with Security/Legal approval and only with the evidence set whose date and scope are stated.
- Legal and privacy templates must be completed for the real contracting parties, deployment, data roles, jurisdiction and retention before use.
- Customer-specific operating procedures and SLA schedules are not universal TIO Hub product commitments.

6. Document portfolio

Category	Deliverables	Core question answered
Technical	System Design Document, engineering guide, API, OpenAPI, schema, migration, release and operations sources	What is implemented, how does it integrate, and what must be verified for a release?
Product and business	Product requirements and roadmap	Who is served, what capability is in scope, and what remains a decision?
Marketing and commercial	Commercial brief and GTM, marketing presentation 2.2; presentation PDF, case-study template	What value can be communicated with evidence and what approval is needed?
User and operations	User guide, knowledge base, SOPs, service management playbook, service schedule template	How should people operate service, contract and SLA work and support a configured installation?
Legal and assurance	Terms template, privacy template, assurance position	What legal decisions and evidence must be completed before a commitment?

7. Issued package

The controlled PDF issue is TIO Hub Documentation PDFs 2.2. The advanced marketing presentation is available as an editable PowerPoint 2.2 and PDF; the System Design Document PDF accompanies its editable source. The archive contains 14 portfolio documents, the System Design Document, and the presentation PDF.

TIO Hub operational context from client to case and review

8. Revision history

Version	Date	Change	Approval
1.0	24 Oct 2026	Initial documentation portfolio	Draft; approval pending
2.0	24 Oct 2026	Rebuilt suite with document control, source hierarchy, review triggers and audience-specific structure	Draft; approval pending
2.1	24 Oct 2026	Refocused portfolio on SLA, contract, financial review and ITSM operations; added controlled service management playbook	Draft; approval pending
2.2	24 Oct 2026	Advanced the control framework, financial reconciliation evidence and service-operations architecture	Draft; approval pending
